1 Introduction

1.1 Mission Statement

Our vision is to provide people all over the world with animals from all over the world; to build a web-based store where people can discover any animal that they might want to buy. Users should be able to create and manage their accounts. The system should also provide administrative functions for managing animals, customers, and orders. We also aspire to provide extensive reporting capabilities that will help managers make great business decisions.

1.2 Executive Summary

ZooBC is a web-based store which sells animals that come from all over the world. We hope to achieve in satisfying our customers by delivering animals in a timely manner and in a humane method. We facilitate purchases by ensuring that the deliveries are secured because we work only one shipping company to avoid any complications that may arise in working with multiple companies.

The *ZooBC* store provides a simple navigation for customers to peruse through the available contents. While shopping, customers can filter by animal classification, type, size or price range. Providing a value in the search bar allows for a direct search by animal name or further refining of the search filters. The search results include a list of animals with an animal image, name, classification, type, size, and price; with the ability to add the animal to the cart.

A more detailed animal profile can be access by clicking on the animal image or animal name. The animal profile provides the same information as the search results, plus the animal's diet, origin, and description. Customer reviews and ratings of the animal can also be found on the animal profile.

Upon checkout, orders are populated using the default information from the user profile. The orders can be processed by entering their credit card information; the format is validated.

An account section provides all users with the ability to update their personal profile, view their orders, and review animals that they have purchased before.

Administrators are also provided with a series of reports and maintenance related functions. The objective here is to provide the administrator with reports that clearly indicate which animals are most popular, or which animals are bringing in the most revenue. The wide range of administrative functions are intended to allow most administrative tasks to be performed

2 Domain Assumptions

2.1 User

- A user will log in using a unique email address.
- A customer cannot have more than one shopping cart at a time.

2.2 Products (Animals)

- Animals will be the only product ever sold by ZooBC.
- An “Animal” refers to a product model.
- The animals for sale are mass-produced and not unique to the buyer.

2.3 Storage / Warehouses

- Animals are stored and stocked in 3rd party warehouses unrelated to this domain.
- Each warehouse maintains a large supply of every animal offered.

2.4 Shipping

- Animal pickups at warehouses is not permitted; they can be delivered only.
- Orders are shipped to the same user who placed the order.
- The user’s profile address will be used as the default shipping address but can be edited.
- The animals are delivered directly to the order’s shipping address.
- Shipments are handled by one 3rd party shipping company for all countries.
- Ground and air transportation options are available for all animals of all sizes.
- Shipping costs are based solely on the transportation type.
- The health of the animals is maintained by the shipping provider.

2.5 Payment

- All transactions will be processed using a credit card (VISA, Mastercard, AMEX).
- VISA and Mastercard numbers must be 16 digits. Amex number must be 15 digits.
- All transactions are advertised and processed using CAD currency.
- A blanket tax rate of five percent is used for all orders.
- Returns or refunds will not be accepted.

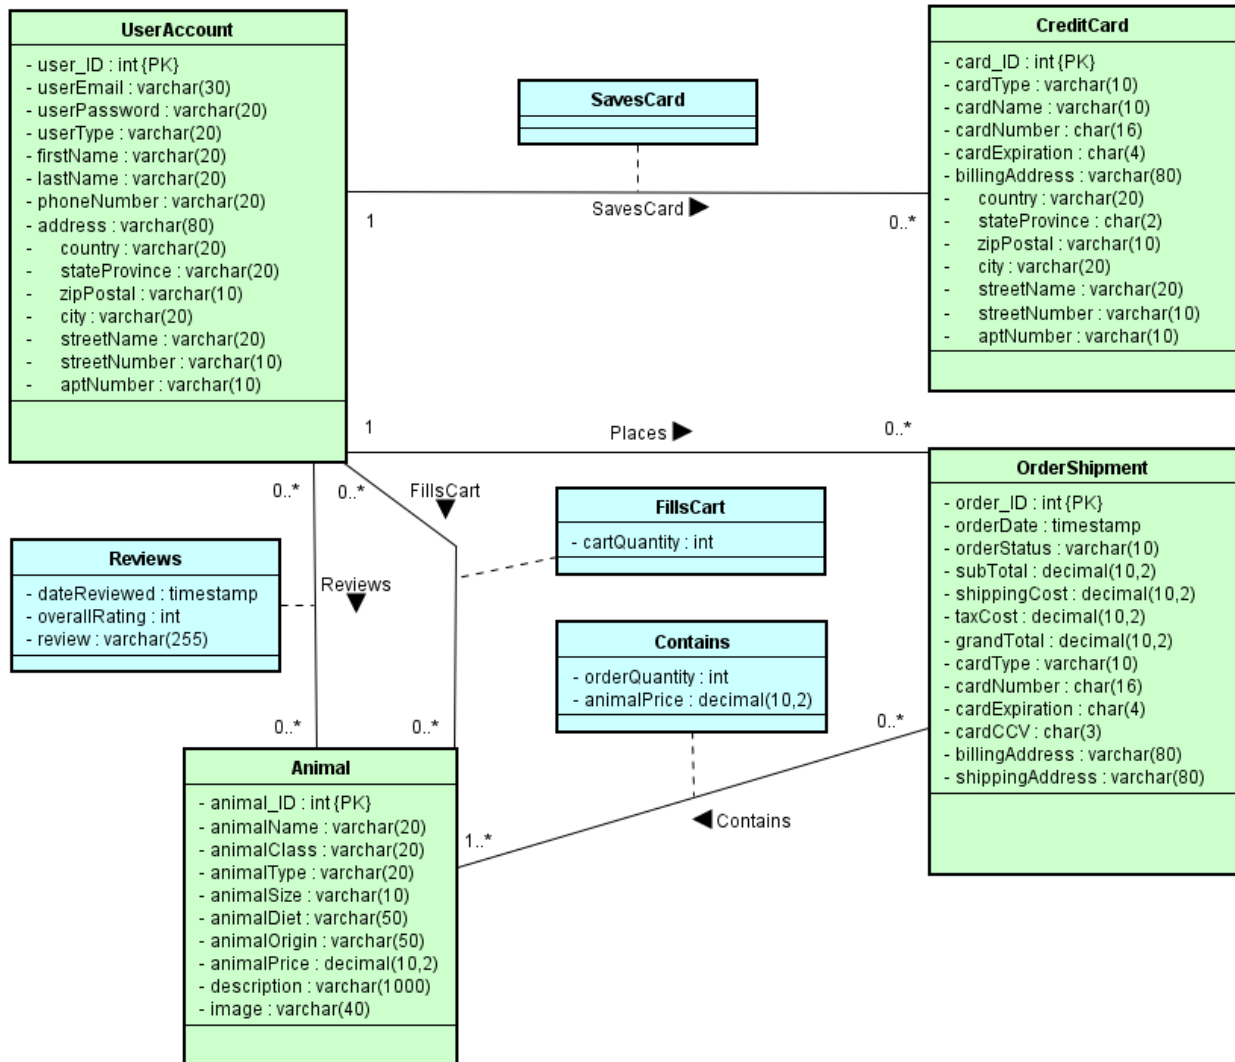

2.6 Legal

- Verification of government permits for importing or exporting animals is not required.

3 Data Model

3.1 UML Diagram

3.2 Entity Descriptions

UserAccount	
Attribute	Description
user_ID (Primary Key)	Uniquely identifies a user. Auto-increments during account creation.
userEmail	Used for account access. Should match a@a.com format.
userPassword	Used for account access. Should be at least 5 characters long .
userType	Identifies the user account type. [Administrator , Customer]
firstName	First name of the user. First letter should be stored as upper case.
lastName	Last name of the user. First letter should be stored as upper case.
phoneNumber	Phone number of the user. Stored as a string. Should match ### - ### - #### format.
address	The address of the user. Composite key containing the sub-attributes below.
country	The country that the user lives in. Used as default for shipping.
stateProvince	The state or province that the user lives in. Used as default for shipping.
zipPostal	The zip or postal code for the user's address. Used as default for shipping.
city	The city, town, or village that the user lives in. Used as default for shipping.
streetName	The name of the street that the user lives on. Used as default for shipping.
streetNumber	The house or building number of the user's address. Used as default for shipping.
aptNumber	The suite, condo, or apartment number for the user's address. Optional .

Animal	
Attribute	Description
animal_ID (Primary Key)	Uniquely identifies an animal name (model). Auto-increments when adding to Animal.
animalName	The name of the animal (model). [Frog , Eagle , Piranha , Starfish , Mammoth , Chameleon]
animalClass	Defines the type of animal. [Amphibians , Aves , Fish , Mammals , Reptiles]
animalType	Defines the type of the animal.
animalSize	Defines the size of the animal. [Tiny , Small , Medium , Large , Giant]
animalDiet	Defines what the animal primarily eats.
animalOrigin	Defines where the animal originally lives or can be found.
animalPrice	The pre-tax price of the animal for the customer.
description	A lengthy description (up to 1000 characters) of the animal.
image	File path to the animal image.

CreditCard	
Attribute	Description
card_ID (Primary Key)	Uniquely identifies a credit card stored by a user.
cardType	Defines the type of credit card. [VISA , Mastercard , AMEX]
cardName	The nick name of the card as specified by the user.
cardNumber	The credit card account number. Entered as #### #### #### #### but trimmed after.
cardExpiration	The expiration year and month of the credit card. Stored in MMYY format.
billingAddress	The credit card's billing address. Composite key containing the sub-attributes below.
country	The country for the credit card's address. Used to help determine the tax rate.
stateProvince	The state or province for the credit card's address. Used to help determine the tax rate.
zipPostal	The zip or postal code for the credit card's address.
city	The city, town, or village for the credit card's address.
streetName	The name of the street for the credit card's address.
streetNumber	The house or building number for the credit card's address.
aptNumber	The suite, condo, or apartment number for the credit card's address. Optional .

OrderShipment	
Attribute	Description
order_ID (Primary Key)	Uniquely identifies an order. Auto-incremented when adding to Order.
orderDate	The date and time that the order was placed. Determined by server at time of purchase.
orderStatus	The status of the order. Administrators can modify. [In Process , Shipped , Delivered]
subTotal	The total cost of the order before taxes and shipping costs.
shippingCost	The shipping cost determined by the shipping method selected by the customer.
taxCost	The cost of taxes for the order. Calculated by multiplying the tax rate with the sub-total.
grandTotal	The overall cost of the product (animal) sub-total, shipping cost, and taxes.
cardType	Defines the type of credit card. [VISA , Mastercard , AMEX]
cardNumber	The credit card account number. Entered as ##### ##### ##### ##### but trimmed after.
cardExpiration	The expiration year and month of the credit card. Stored in MMYY format.
cardCCV	The Card Verification Value number found on the back of the credit card in ### format.
billingAddress	The billing address for the order. Stored at the time of purchase.
shippingAddress	The shipping address for the order. Stored at the time of purchase.

FillsCart	
Attribute	Description
cartQuantity	The quantity of a specific animal (model) added to the user's shopping cart.

OrderContains	
Attribute	Description
orderQuantity	The quantity of a specific animal (model) added to the order.
animalPrice	The price of the animal at the time of order.

Reviews	
Attribute	Description
dateReviewed	The date and time that the user left a review on the animal (model) received.
overallRating	A rating between 1 and 5 (lowest to highest) of the animal (model) received. [1 , 2 , 3 , 4 , 5]
review	A descriptive review of the animal. One review per an animal, per a user - after purchase.

3.3 Relational Assumptions

Relationship	Description
UserAccount FillsCart → Animal	A user can have zero to many animals in their shopping cart. An animal can be in zero to many users' shopping carts.
UserAccount Reviews → Animal	A user can review zero to many animals. An animal can have zero to many reviews.
UserAccount SavesCard → CreditCard	A user can save zero to many credit cards. A credit card can only belong to one user.
UserAccount Places → OrderShipment	A user can place zero to many orders / shipments. An order / shipment can only be placed by one user.
OrderShipment Contains → Animal	An order / shipment must contain at least one animal. An animal may be on zero to many orders / shipments.

```

5 Known Issues

- The login page did not get finished. Although the site is set up for multiple users. The user is fixed as user_ID = 1
- The ability to store user credit cards for quick use during checkout is incomplete.
- The Manage Animals page can add an animal but the ability to update or delete is existing animals incomplete.
- When adding new animals, images cannot be uploaded. Also, the description box is not ideal for long strings.
- The Manage Users page does not properly retrieve the profile of other users.
- All users can see the administrative functions.
- When reviewing an animal, the animal name is placed in an input box to pass it as a parameter in the URL. The name should be fixed. The review will not succeed.
- The restore database link is not working properly.
- SQL script should be used for all the filters in the Shop Animals page to accommodate for new animals being added.
- The arrow buttons on the shop animals page were placed there as triggers for sorting the animal list. That feature is incomplete.

6 User Walkthrough

Visit the link <http://cosc304.ok.ubc.ca/29164977/tomcat/ZooBC/WebContent/ZooBC.jsp>

Below is the list of users pre-loaded into the database using inserts with the DDL:

User ID	Email	Password	User Type	First Name	Last Name
1	admin@zoobc.ca	adminpass	Administrator	Paying	Administrator
2	customer@zoobc.ca	customerpass	Customer	Paying	Customer
3	keeper@zoobc.ca	keeperpass	Customer	Zoo	Keeper

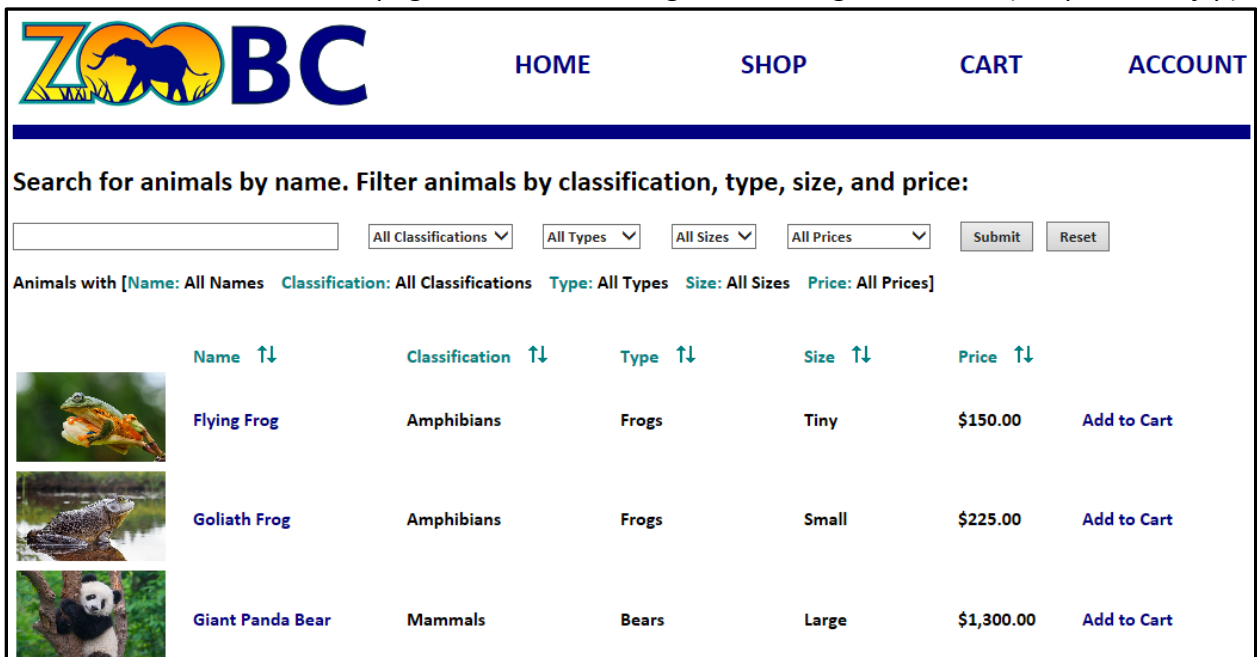

Below is a screenshot of the website home page (ZooBC.jsp):

To begin shopping, click on either the “SHOP” link in the header, or on the “BUY NOW” image.

Below is a screenshot of the page used for browsing or searching for animals (ShopAnimals.jsp):

An animal can be searched by **name** and filtered by **classification**, **type**, **size**, or **price range**.
 An animal can be added to the shopping cart by clicking on the “**Add to Cart**” link.
 More details about an animal can be accessed by clicking on the “**Animal Name**” or its image.

Below is a screenshot of the animal profile page (Product.jsp):

Overall Rating:	5	

Name: Flying Frog
Classification: Amphibians
Type: Frogs
Size: Tiny
Diet: Insects
Origin: Southeast Asia

Description: Despite their name, Flying Frogs cannot fly, but they can glide from tree to tree. They use their large, webbed hands and feet for control as they glide through the air. They also act as parachutes. Flying Frogs lay their eggs high up in the trees of the rain forests where they live. The frogs make foam nests to their eggs in. They make this foam by mixing mucus with rainwater.

Price: \$150.00 [Add to Cart](#)

An animal can also be added to the shopping cart here by clicking on the “**Add to Cart**” link. Adding an animal to the shopping cart will immediately redirect the user to view the cart.

Below is a screenshot of the shopping cart page (ViewCart.jsp):

ZOOBC HOME SHOP CART ACCOUNT

Your Shopping Cart

Animal ID	Product Name	Quantity	Price	Subtotal	
1	Flying Frog	<input type="text" value="1"/> Update	\$150.00	\$150.00	Remove Item from Cart
2	Goliath Frog	<input type="text" value="1"/> Update	\$225.00	\$225.00	Remove Item from Cart
3	Giant Panda Bear	<input type="text" value="1"/> Update	\$1,300.00	\$1,300.00	Remove Item from Cart
4	Grizzly Bear	<input type="text" value="1"/> Update	\$9,000.00	\$9,000.00	Remove Item from Cart
5	Sun Bear	<input type="text" value="1"/> Update	\$100.00	\$100.00	Remove Item from Cart
			Order Total	\$10,775.00	

[Check Out](#)
[Continue Shopping](#)

From here, the quantity of each animal on the order can be updated by adjusting the value in the quantity field and clicking on the “**Update**” button next to it. Alternatively, the animals can be removed from the shopping cart by clicking on the “**Remove Item from Cart**” link.

Below is a screenshot of the checkout page (Checkout.jsp):

The screenshot shows the Zoobc checkout page. At the top is the Zoobc logo and navigation links: HOME, SHOP, CART, and ACCOUNT. Below the navigation is a blue header bar. The main content area is titled "Please enter your payment, billing, shipping, and user information:". It contains four sections: Billing Address, Shipping Address, Payment Information, and Shipping Option. The Billing Address and Shipping Address sections have input fields for Apt Number, Building Number, Street Name, City, Zip/Postal, State/Province, and Country. The Payment Information section has input fields for Card Type, Card Number, Card Expiration, and Card CCV. The Shipping Option section has a dropdown menu with "Ground - \$40" and "Air - \$500" options. The User Information section has input fields for Email Address and Password, and "Submit" and "Clear Fields" buttons.

The billing address and shipping address are automatically populated based on the address found in the user’s profile. They can be manually updated here by replacing the existing values.

The credit card information is validated for number of digits in the credit card number, the format of the expiration, and the format of the CCV number. Additionally, a check is done to ensure a shipping option has been selected. If validations are passed, clicking on the “Submit” button will process the order.

Invalid quantity of credit card numbers for VISA. Please enter 16 digits.
[Return to Check Out](#)

Invalid quantity of credit card numbers for AMEX. Please enter 15 digits.
[Return to Check Out](#)

Invalid credit card expiration. Please enter 4 numbers (MMYY)
[Return to Check Out](#)

Invalid credit card expiration. Please enter 3 numbers (i.e 123)
[Return to Check Out](#)
